TIME Magazine is out with its [Best Inventions of 2006](#).

What made the cut? Here are some highlights:

### Lighting: CeeLite - Flexible Lightbulbs

Of all the products on the list, this one seems like it's going to have the most long-term impact on the way the average person lives (sorry, CrustaStun). The CeeLite is a 1 mm thick flexible light with light-emitting capacitors that light when plugged in. It can also be programmed to dim or flash on contact. When the price of the technology comes down, expect to see this in application everywhere.
