31<sup>ST</sup> ANNUAL **PRODUCT OF THE YEAR AWARDS**

The LEP Panel from CeeLite

## Flexible illumination panel delivers white light anywhere

In addition to replacing incandescent lamps in traditional lighting roles, solid-state lighting is opening up new application areas to illumination designers.

Able to deliver 7,500K white light at up to 200 nits in a thin form factor conformable to nearly any surface, the CeeLite 7501 light-emitting capacitor illumination panel is presented as the first tough and flexible flat light emitter of its kind.
