

CEELITE™ / Booth #1004

Consuming relatively little electricity compared to neon or even fluorescent, the 7501 panel is a flexible “light bulb” with light-emitting capacitor (LEC) technology that enables uniform illumination on surfaces. Suitable for signage, exhibitions, POP displays, and backlighting, the paper-thin product features embedded dimming, fading, and flashing options. Color temperatures range from 7500 to 11000K.
