## "CEE" THE LIGHT

People are like moths. They're attracted by light—light creates crowds, and nothing attracts a crowd, like a crowd, which is why I find CeeLite™ panels to be one of the

coolest lighting products to be introduced to the nightclub industry since, well, the lightbulb. Manufactured by Pennsylvania-based CeeLite, CeeLite panels are paper-thin, bendable and bulbless panels, as large as four-foot-by-eight-foot, that can be used indoors or out.

CeeLite is the first company to manufacture and market light emitting capacitor lighting panels can illuminate signage, architecture and design, displays and photography. CeeLite panels can go anywhere from DJ booth fronts, floors, walls and wrap-around columns.

Additionally, they can be cut into limitless shapes and sizes, as well as lettering and numbers. Adhere photographic transparencies over the CeeLite panels and you can have bendable and backlit photos and murals that can, literally, go anywhere in your adult nightclub.

The CeeLite "sheets" are a combination of LEC-based lighting that's the result of enormous research and development efforts that uniquely combines OSRAM SYLVANIA higher quality phosphors, CeeLite's smart, programmable Flatline Inverters and multiple packaging options to provide the highest quality illumination. CeeLite's LEC-based lighting offers superior brightness, long life and many programmable standard features, such as dimming, fading and flashing.

CeeLite panels typically consume very small quantities of electricity relative to incandescent, neon and florescent lighting, so operational expenses are low in relation to the unique lighting applications and huge light output. The impact of this technology is predicted to be reminiscent to that of fluorescent, halogen and light emitting diode (LED)-based lighting when these lighting technologies were first introduced into clubs decades ago. CeeLite is at the forefront of this lighting paradigm shift and leads the club and architectural lighting industry with stunning and technological lighting innovations.
